

UMAIR ALI

AI / ML ENGINEER · MLOPS · LLM SYSTEMS

Copenhagen, Denmark · malik.ali642@gmail.com · github.com/ituhub · https://www.linkedin.com/in/umairali28/ · ituhub.github.io/portfolio

PROFILE

AI/ML engineer who takes machine learning systems all the way to production — data pipelines, model training, deployment, monitoring, billing and support. I have designed, shipped and now operate two **live platforms on Google Cloud: EnergyLens**, a Nordic day-ahead electricity price forecaster, and **MarketLens**, a SaaS trading-analytics product. Stanford ML and Google Advanced Data Analytics certified, with hands-on BigQuery, Airflow, dbt and PySpark experience on production data. Looking for ML, MLOps or LLM engineering roles where I own systems end to end.

CORE SKILLS

Programming

Python | SQL | FastAPI | React

Machine Learning

PyTorch | TensorFlow | XGBoost | Scikit-learn | SHAP | Optuna

Time Series

Transformer | CNN-LSTM | TCN | N-BEATS | LSTM-GRU ensembles

LLMs

RAG | Gemini API | Vector search | Embeddings | Prompt engineering

Data Engineering

BigQuery | PostgreSQL | dbt | PySpark | Airflow | Pub/Sub | DuckDB | Firestore

Cloud & MLOps

GCP (Cloud Run, GCS, Scheduler) | Docker | Git | GitHub | GitHub Actions | CI/CD | Drift detection

PRODUCTION PLATFORMS

Founder & ML Engineer · **MarketLensPro** Jan 2025 – Present

Live SaaS · marketlenspro.app · GCP Cloud Run

- **Shipped and operate a live SaaS** delivering real-time ML signals across 19 asset classes at three timeframes with sub-second inference — sole owner of data, models, deployment, billing and customer support.
- **Removed manual retraining entirely:** drift detection triggers GPU retraining, and versioned models hot-reload from cloud storage with zero downtime and no redeploy.
- **Built a production RAG assistant** on Gemini embeddings and vector search over a 29-document knowledge base, so customers get instant answers instead of waiting on manual support.
- **Delivered the full commercial product:** Firebase Auth, Stripe billing, a rate-limited B2B API with HMAC-SHA256 signing, Telegram alerting, a paper-trading engine, and a published cTrader Store plugin.

ML Engineer · **EnergyLens — Nordic Power Markets** 2025 – Present

Live platform · GCP Cloud Run · Python / FastAPI + React

- **Forecasts DK1/DK2 day-ahead prices 24 hours ahead** with an 8-model neural ensemble trained on Nord Pool, ENTSO-E and weather data.
- **Built the ingestion pipeline and backfilled 568,000+ ENTSO-E generation records** (365 days, DK1 + DK2); the platform now refreshes automatically every six hours on Cloud Scheduler.
- **Engineered 110+ features** including wind and solar generation signals, and score every forecast against actuals (MAE, RMSE, directional accuracy) for a continuously audited track record.
- **Made forecasts trustworthy and auditable:** a bitemporal data model (valid time + knowledge time) enables leakage-free point-in-time backtesting, backed by 5-gate signal-quality validation and SHAP explanations.

SELECTED EARLIER PROJECTS

- **QuantLearn Studio (2023–24)** — AutoML education platform with 9+ algorithms, live market data and walk-forward backtesting, letting non-specialists train and validate models without writing code.
- **Anomaly Detection Engine (2024)** — weighted ensemble of statistical, ML and autoencoder detectors with drift and regime monitoring, surfacing outliers in streaming time series.
- **dbt + DuckDB Analytics** — modelled 1,718 production signals and 461 trades from Firestore into tested, documented dbt marts.

EDUCATION & CERTIFICATIONS

ML Specialization — Stanford / DeepLearning.AI, 2023 | **Advanced Data Analytics** — Google, 2023

AWS Cloud Practitioner — Amazon Web Services, 2024 | **AI in Project Management** — Copenhagen Business School, 2022

Financial Operations — Niels Brock, 2020 | **GCP Data Engineering Lab** — Self-directed, 2026

EARLIER EXPERIENCE & ADDITIONAL

Retail Associate · IKEA / Circle K, Copenhagen · 2014–2022 — customer operations and inventory management; moved into ML engineering in 2022–23 via certifications while building the first platforms.
